

Revamp your boardroom

Your boardroom is the hub of your business. This is where important people meet and key decisions are made. Ensure that your boardroom is fitted with all the necessary equipment to handle any kind of situation - from conference calls to meetings or presentations. We can assist with a solution to fit your individual needs.

PHDS Direct will create a tailor-made solution for your company. We offer you the best tools to move your business forward with the most effective and productive AV solutions.

We provide the following solutions:

- Microphones whether mobile or fixed
- Integrated control systems
- Projectors and presentation screens
- Displays
- Video conference systems
- Room booking systems
- Meeting and conference recording systems

PHDS Direct is a Level 1 BEE certified company and we are registered suppliers on the Central Supplier Database - MAAA0813808

Meeting & Conference Recording Solutions

Whether you have a small boardroom, huddle-room space or large government chamber area, we have various recording solutions for you based on your specific requirements.

Many corporate and government establishments require customised AV solutions that are dependable, can address both intra-departmental needs as well as communicating to the public at large. With the right collaboration of products that are easy to setup, use and maintain, our integrated solutions provide you with resources to execute meetings or conferences as required.

Microphones with onboard speakers can be used either permanently retrofit to the furniture or as a table top solution. We provide **wired and wireless conference microphones** to provide intelligent sound in the room for both local sound reinforcement and also crystal clear conference calls.

We also offer **language interpretation systems** and **document workflow management software** to ensure that every word spoken is captured and then completed recordings are directed to the relevant person/s for transcription or able to be archived as necessary.

Video Conferencing

The rapid development of technology and the Internet have revolutionized the way businesses communicate. Video conferencing is a technology that allows users in different locations to hold face-to-face meetings without having to move to a single location together. This technology is particularly convenient for business users in different cities or even different countries because it saves time, expense, and hassle associated with business travel. Video conferencing brings multiple benefits far beyond face-to-face communications.

General requirements for a video conferencing system include:

- High quality audio and video;
- Support for high-definition content sharing;
- Smooth low-bandwidth conferencing;
- Easy deployment and usage, especially for branches.

Huddle-room Solutions

Huddle rooms are intimate spaces, equipped with **audio, video and display system technology**. They provide a quiet space where a small group of collaborators can have an intimate conversation without interruptions.

Many remote workers prefer huddle rooms when it comes to video conferencing because their **ability to connect** and feel like they are a genuine part of the conversation is enhanced.

We provide all the AV equipment required to turn your huddle-room space into the perfect small meeting space, customized to your specific requirements.

Room Booking Systems

Room booking systems allow staff to **book meeting rooms and equipment** in the workplace using their email calendar or touch screens located outside the boardroom, **streamlining workflow and promoting cooperation** in the office. This simple boardroom solution allows staff to select and allocate booking times, down to the minute, avoiding miscommunication, conflict over office space, and unnecessary interruptions. The digital interface also provides an analysis of the room's history and equipment condition/use.

Efficient: No more interruptions or waiting.

Flexible: Check the availability of meeting rooms throughout the day and book an open timeslot.

Easy to Operate: Book a slot quickly and easily.

Real-time content: With just a swipe of your hand you can see in real time if the room is booked, who is using it, and when the next spot is available.

Analytical and Informative: Track your company's meeting habits and equipment use and manage your time and equipment accordingly.

Wireless Presentation Systems

A Wireless Presentation System is a media streaming device that enables one or more users to wirelessly present content from a PC, tablet or smartphone on a bigger screen, using screen mirroring technology. This technology is suitable in various collaborative environments such as meeting rooms, conference rooms, huddle spaces and classrooms.

Wireless Presentation Systems play an important role in terms of information sharing in collaborative working environments. These systems enable users to send different types of content (desktop, docs, images, videos, and apps) together with audio from any device to a projector, large monitor or TV. Thus, multiple users can seamlessly present, share, and exchange ideas on the displayed content —without restrictions.

Wireless Presentation Systems are used for a range of applications, such as:

- Connecting a laptop, desktop PC, smartphone or tablet to any TV wirelessly
- Streaming or mirroring video and audio from any device onto a bigger screen or projector
- Enabling interaction between users through sharing content on a common screen
